### **The new length measuring system LMSCA**

#### **Ultra-compact and industrially robust length measuring system**

Wachendorff Automation is expanding its product portfolio of length measuring systems to include an extremely compact yet robust system. The system is just 120 mm long!

It can be combined with measuring wheels of 200 mm circumference.

With the pre-assembled encoders of the WDGP series, resolutions of 80 pulses per millimeter or 0.0125 mm per pulse are achievable.

Other important feature: adjustable contact pressure from 0 to 20 Newton in 5 Newton steps!
